# 1 Introduction

---

Initial dex offerings, or IDOs, are tokens that represent any type of asset hosted on a decentralized exchange (DEX) — an IDO is when a project launches a token through a decentralized liquidity exchange. IDOs offer businesses a tool for engaging their communities in an economy that both enriches their products and services while allowing them to make smart business decisions regarding their assets.

In the same way that traditional startups receive venture capital before launching, projects issuing initial DEX offerings receive financing from individual investors. Unlike an initial public offering, investors in initial dex offerings never own any equity in the project. IDOs have some benefits that may make them more attractive than ICOs and IEOs: immediate liquidity, immediate trading and lower costs for listing.

Since IDOs are extremely popular nowadays, a lot of new projects appeared on networks such as Ethereum and Binance Smart Chain. Our platform will offer project teams a secure and reliable token sale on Fantom Network.

Our community will be able to stake our native SMART tokens on the platform and then for each presale, they will be rewarded with 25% of creation fee and 0.5% of presale owner remaining funds.

## **Summary of Features**

- Reliable token sales being handled by smart contracts.
- Instant liquidity listing on SpookySwap to avoid rug pulls.
- Sharing of additional rewards with SMART stakers.

# 2

## Platform Ecosystem

---

### 2.1 Presale Creation

The platform is designed to be simple to use for both token owners and investors. This will save teams time from all the research required to run a token sale and let them focus on their project. To be able to create a presale on our platform, the only thing project teams need to do is setting the parameters for their presales and paying the creation fee. LP tokens are automatically locked in our SmartLocker contract. Detailed information to create a presale will be shown on the platform. After each presale creation, 25% of the fees will directly go to our SMART token staking pool to be distributed.

### 2.2 Presale Participation

Recently, existing presale platforms suffer from trading bots. We developed a method for preventing bots fill the presales and dump their token immediately after finalization for small profits. Our participants will not need to worry about investing a project in that matter. Our platform offers a simple UI and people who want to participate a presale will be able to check every information of it on our platform.

## 2.3 Security of a Presale

We provide several information about presales for the investors. Those are:

1. How many token does the owner hold outside of the issued presale?
2. How many tokens in total are held outside of the issued presale?
3. How much of the funds will be added to liquidity?
4. How much is softcap/hardcap gap for the issued presale?
5. How much is min/max participation amount gap for the issued presale?
6. How much is listing/presale price?
7. How long is the duration of the issued presale?

Although we provide such information, you should check the token contract to make sure about those information. Verified contracts don't necessarily mean that they are safe and rug-proof but we strongly recommend participants to invest projects with verified contracts only or ask project teams if they have a solid reason for not verifying the contracts.

In any circumstances, all the participants should **DO THEIR OWN RESEARCH** before participating a new project.

### 3.1 SMART Tokenomics

Some portion of SMART token will be distributed by our presale contracts to the participants. Since we offer an IDO platform, funds raised from our presale will be used for initial liquidity and our participants will be able to trade or stake their SMART tokens right after finalization.

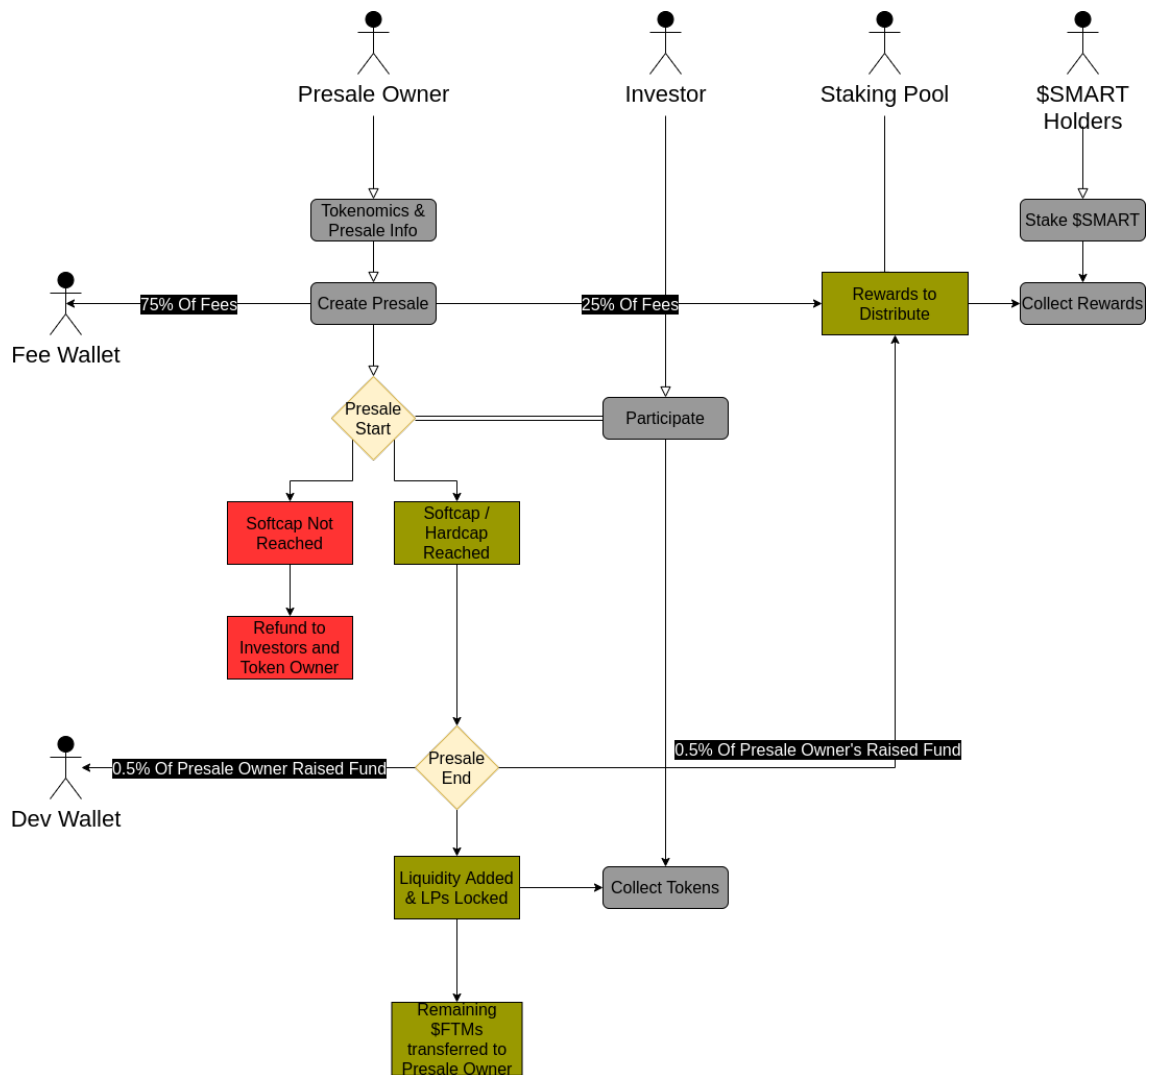

- 100,000 Total Supply
- 54,000 for token sale
- 40,500 for liquidity
- 4,500 for marketing
- 1,000 for airdrop

- IDO Sale
- Airdrop
- Liquidity
- Marketing

## Presale Money Summary

## **Q1: 2021 Platform Testing**

In this phase, we decided to create a platform mainly for FTM Network integrated with a token. After implementing the platform alongside with the contracts, we started testing possible scenarios. Each testing phase brought new ideas and at the end of this phase we started to create a community.

## **Q2: 2021 Platform Launch**

In this phase, contracts will be deployed. Since SMART token is the main token of our platform, SMART token presale will be the first presale that will be held on our platform. After completion of SMART presale, SMART holders will be able to stake their SMART tokens for taking part of rewards. From each presale which will be held on the platform, SMART stakers will be rewarded with 25% of the creation fee.

## **Q3: 2021 Token and Locker Creation**

For those who would like to lock their tokens, we will be implementing a locker contract. Other than that, token creation contracts will be implemented for those who would like to create a token. This will ensure that tokens which will be created using the platform will have a standart structure and more secure.

## **Q4: Other Networks**

In this phase, we will also be joining networks other than BSC and FTM.
